

Pneumatically Actuated Lug Style Butterfly Valve Type 244

General

- **Size:** 2"–12"
- **Outer Body:** Glass-filled PP
- **Material:** PVC, CPVC, PROGEF® Standard PP, ABS, SYGEF® Standard PVDF
- **Seals:** EPDM, FPM, PTFE/FPM
- **Stem:** 316 stainless steel
- **Lugs:** Overmolded 316 stainless steel
- **Actuator Housing:** Anodized Aluminum
- **Action:** FO,FC,DA
- **Connection:** ANSI 150
- **Stroke Limiter:** 10 degrees open/close
- **Standard Pack Quantity:** 1 valve

Sample Specification

The Type 244 Pneumatically Actuated Butterfly Valve shall be lug style compatible with ANSI B16.5 150 lb flange patterns. The disk operation shall utilize double eccentric design principles. The shaft shall be non-wetted by a bushing assembly with double O-ring seals and fixed at both ends. The face seal shall be a Q-ring compatible with flat and serrated flange adapters. The face, disk and shaft seals shall operate independently. The wetted body and disk shall be of like materials. Valves shall be rated for bidirectional use. The actuator housing material shall be anodized aluminum. The pneumatic connections and accessory console mounting pattern shall be NAMUR compliant. The end stops shall be mechanically adjustable by 10 degrees in the open and close positions. All valves shall be tested in accordance to ISO9393 and designed to ISO16136 standards. All valves shall be manufactured under ISO9001 for Quality and ISO14001 for Environmental Management. Following assembly, every valve shall be tested and certified bubble tight exceeding Class VI standards.

Material Specification

PVC valves shall meet ASTM D1784 cell classification 12454 standards. CPVC valves shall meet ASTM D1784 cell classification 23447-B standards. PP valves shall meet ASTM D5847-14 cell classification PP0510B66851 standards. ABS valves shall meet ASTM D3965 cell classification 42222 standards. PVDF valves shall be type 1, grade 2 according to ASTM D3222 standards. Valves of all materials shall be RoHS compliant.

Key Valve Certifications

- **NSF 61:** PVC and CPVC
- **FDA CFR 21 177.1520:** PP and PVDF
- **FDA CFR 21 177.2600:** EPDM and FPM
- **FDA CFR 21 177.1550:** PTFE
- **ABS:** All materials
- **USP Class VI (physiological non-toxic):** EPDM, FPM, PTFE, PP and PVDF

Key Design Feature

Components

Optional Features

- **Pilot Valve:** 24VAC/DC, 110VAC, 2303VAC
- **Positioner:** Digital electro-pneumatic
- **Limit Switches:** Mechanical, inductive
- **Manual Loading Station:** Local control box
- **Manual Override:** Stainless steel
- **Stem Extension:** Two piece stainless steel
- **Shaft:** Titanium, Hastelloy-C
- **Hardware:** Alternatives available upon request
- **Cleaned:** Silicone free/oil free

Material Availability

It is not possible to use inner housings with disks of different material. Valves of all sizes and materials are available with both EPDM and FPM seals. Only CPVC, PP and PVDF valves are available with PTFE encapsulated FPM disc seals. GF does not offer disc seals that deviate from their standard product offering.

Double Eccentric Design Principle

The Type 244 PA Butterfly Valve is designed using the double eccentric disc principle. When opening and closing, the disc is not in contact with the seat, significantly reducing component wear. This design principle greatly reduces the operating torque and required elastomeric sealing material. The reduction in sealing material decreases the impact of elastomeric swelling. The benefits of double eccentric valves include a reduction in required actuator torque and extended valve lifetime.

Key Design Feature

PTFE Disc Seal

The Type 244 Butterfly Valve is available with a PTFE encapsulated FPM disc seal. The FPM core provides flexibility to the PTFE shell and allows for a reliable seal. The double eccentric design limits the amount of PTFE required. The face and shaft seals are FPM blended with approximately 15% PTFE.

Actuator Technical Data

PA 30-70	
Control Medium	Neutral, non aggressive gases (max. 104°F)
Actuator Style	Scotch yoke
Max Allowable Control Pressure	100 psi
Pneumatic Connection	1/8" BSP (2"-8" FC/FO) 1/4" BSP (10" and 12" FC/FO) 1/8" BSP (2"-12" DA) NPT adapter included with assembled valves
Cycle Time	1-2 seconds
Operating Temperature	14°F-176°F
Actuation Angle	90°
Action	Fail-safe close (FC) Fail-safe open (FO) Double acting (DA)
Permissible Humidity	0-95%
Position Indicator	Visual
Housing Material	Anodized aluminium

Key Design Feature

Seals

The Type 244 Butterfly Valve features a truly non-wetted shaft design. The shaft is sealed with a bushing assembly on either side of the disc. Each bushing utilizes a double o-ring seal totalling eight shaft seals in every valve.

Alternative o-ring shaft sealing designs are commonly found in competitive boot style thermoplastic butterfly valves. However, these solutions often rely upon elastomer on elastomer seals which can be unreliable, especially in chemical process applications or when working temperatures deviate from standard conditions. The Type 244 shaft seal design eliminates the need elastomer on elastomer seals, providing an industry tested dynamic double o-ring seal against a ridged thermoplastic surface.

The shaft, disc and face seals all operate independently from one another. This eliminates issues common to booted style centric valves such as crimping, where the compression of the valve between two flanges causes the boot to ripple. This can lead to increased operating torque and wear, ultimately reducing the useful life of the valve.

Technical Data

Pressure-Temperature Curves

The following graphs are based on a lifetime of 25 years of water or similar media applications

PVC

CPVC

PP

ABS

PVDF

Pressure-Temperature

Material	Temperature Range (°F)	Max Pressure (psi)
PVC	32 to 140	150
CPVC	32 to 176	150
PP	32 to 176	150*
ABS	-40 to 140	150
PVDF	-4 to 284	150

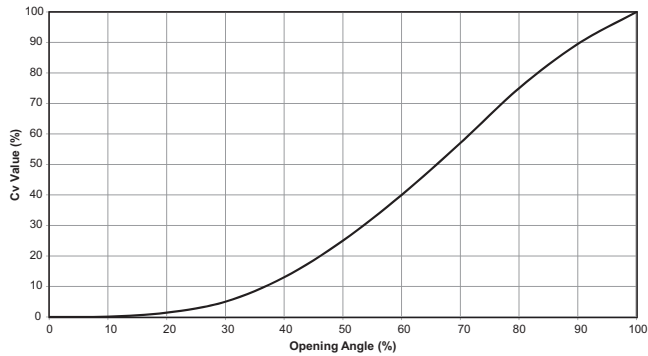

*Dependant on end connection as shown in P-T curves

The Type 244 is rated for full vacuum service. Maximum differential pressure of 15psi at 122°F.

Flow

The following information is based on water applications at 68° F
